

Testing Validity with 17th century Euler-type and Phoebifer Axis Diagrams

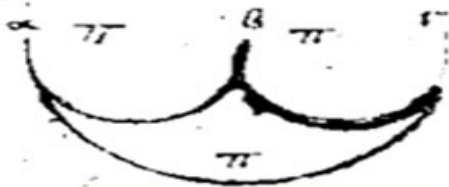

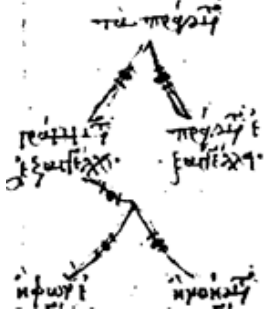

Jens Lemanski
(Hagen, Germany)

Content

1. Short History of Early Modern Logic Diagrams
2. 2nd Period of Euler-type Diagrams
3. Phoebifer Axis Diagram
4. Conclusion

1) SHORT HISTORY OF EARLY MODERN LOGIC DIAGRAMS

Most Popular Logic Diagrams

<p>QUADRATA FORMULA/ SCHEMA OPPOSITIONUM</p>		<p>9th (/13th) century Italy Robertus Anglicus: <i>Commentary on the Summulae logicales</i> of Peter of Spain, Remnant Trust no. 0894, Ms 26, fol. 14r.</p>
<p>PONS ASINORUM</p>		<p>12th century, central Europe Aristoteles: <i>Organon</i> (Wolfenbüttel. Cod. Guelf. 24 graec., fol. 32r)</p>
<p>ARBOR PROPHYRIANA /SCIENTIA</p>		<p>late 13th century, Terra d'Otranto: Aristoteles: <i>De Interpretatione with a Comm. of Psellus</i> (Magdalen College, P. Magdalen Gr. 15, fol. 1r)</p>
<p>EULER-TYPE DIAGRAMS</p>		<p>early 16th century, Netherlands Juan Luis Vives: <i>De censura veri et falsi</i>. Bruges 1531</p>

Vives
Reimers
Keckermann
Alsted

Weigel
Sturm
Leibniz

Weise
Großer
Lange

Ploucquet
Lambert
Euler

et al.

1531 – 1611

1660 – 1712

1758 – 1880

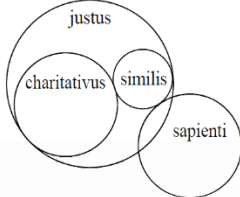

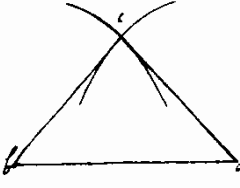

Typical characteristics of a period

- 1) After the end of a period Euler-type diagrams fall into oblivion
- 2) Therefore, the first logicians at the beginning of a period claim that they are the inventors of Euler-type diagrams
- 3) All logicians of a period know only the Euler-type diagrams of logicians from your own period

2) 2ND PERIOD OF EULER-TYPE DIAGRAMS

Period II: 1660–1712

Life data	Name	Place	Work	Year	Notation
1635– 1703	JOHANN CHRISTOPH STURM	(Jena) Leiden	<i>Novi Syllogizandi Modi</i>	1661	
1646– 1716	GOTTFRIED WILHELM LEIBNIZ	Hannover (Jena)	Beiblatt von <i>De cogitationum analisi</i>	~1687– 1690	
1625– 1699	ERHARD WEIGEL	Jena	<i>Philosophia Mathematica</i>	1693	
1664– 1736	SAMUEL GROSSER	Görlitz	<i>Gründliche Anweisung zur Logica; Pharus Intellectus</i>	1697	
1669– 1756	JOHANN CHRISTIAN LANGE	(Zittau)/ Gießen	<i>Nucleus Logicae Weisianae</i>	1712	

Characteristics of the 2nd period

- **Rejection** of the **scholastic** proof method for syllogisms (Barbara, Celarent etc.)
- Euler-type diagrams are intended to represent a **unified proof** theory for all syllogisms
- Euler-type diagrams are used exclusively by **Protestant logicians** in Northern Europe.
- Euler-type diagrams are a **counter movement** to Catholic Baroque scotism in southern Europe (Phoebifer Axis-diagrams).

Erhard Weigels *Neu-erfundener Hauß-Rath/*
Newly invented appliances (1672)

“Logometrum or the inference measure/ for the facilitation of the art of reasoning/ by this one can distinguish true syllogisms and inferences from the false ones in a very handy and comfortable way.”

„Logometrum oder das Schlussmaß/ zur Erleichterung der Schliessekunst/ dadurch mann die wahren Syllogismos und Schlußreden von den falschen recht Handgreiflich unterscheiden kann.“

Erhard Weigel

Erhard Weigel: Philosophia Mathematica (1693)

“I have discovered that the coincidence & distance of lines and figures have a closer resemblance with metaphysical identity & diversity, viz. so much that equally the identity looks like coincidence (viz. predicative) & the diversity looks like distance, so that on both sides the strength and force of the whole Syllogisation is close to the dictum de omni & nullo. Finally, I have discovered that Aristotle had not only good reasons for using terms of the geometers (boundary, connection, scheme [πέρας, σύνδεσμος, σχῆμα]) in order to describe the traditional syllogisms, but also that all modi of the syllogisms can be learned more easily by means of geometrical schemes and figures than by Barbara, Celarent and can be demonstrated (or reduced) in much shorter form than by *Phoebifer axis obit terras aethramque quotannis*;

SCHEMATIS APPLICATIO.

Nullum B. *convenit* cum C. (*ullo;*)
 Sed Omne A. *convenit* cum B. (*quodam;*)
 E. Et Nullum A. *convenit* cum C. (*ullo.*)

Algorithmic Proof Method

(A) Construct all possible diagrams according to the construction rules of the 1st and then the 2nd premise.

(B) Check if you can read the conclusion from all constructed diagrams or not.

(B1) yes: the inference is valid (regularis)

(B2) no: the inference is invalid (irregularis)

Example: B2

*MODI IRREGVLARES:
PECCANTES CONTRA REGVLAM,
Quæ Majorem Propositionem vult esse uniuersalem.*

MODVS, ubi Major Prop. est particul. affirmans.

20.)

*SCHEMA- | -- Quodd. B. continetur in C.
TIS APPLI- | Et Omne A. continetur in B.
CATIO. | E. & Quodd. A. continetur in C.*

3) PHOEBIFER AXIS DIAGRAMS

Erhard Weigel: Philosophia Mathematica (1693)

“I have discovered that the coincidence & distance of lines and figures have a closer resemblance with metaphysical identity & diversity, viz. so much that equally the identity looks like coincidence (viz. predicative) & the diversity looks like distance, so that on both sides the strength and force of the whole Syllogisation is close to the dictum de omni & nullo. Finally, I have discovered that Aristotle had not only good reasons for using terms of the geometers (boundary, connection, scheme [πέρας, σύνδεσμος, σχῆμα]) in order to describe the traditional syllogisms, but also that all modi of the syllogisms can be learned more easily by means of geometrical schemes and figures than by Barbara, Celarent and can be demonstrated (or reduced) **in much shorter form than by *Phoebifer axis obit terras aethramque quotannis***;

- “Phoebifer axis obit terras sphaeram/aethram-que quotannis.”
- “The sun's axis revolves around the earth and the sphere/ether every year.”

Year	Place	Book	Name	Life Data	Confession

Algorithmic Proof Method

(A) Use Phoebifer Axis in order to find the perfect syllogism (PS) for proving an imperfect syllogism (IS) indirectly/apagogically.

(B) Use the contradiction of the IS-conclusion as one PS-premise and adopt one IS-premise as the other PS-premise unchanged.

(C) Check whether the PS-conclusion is the contradiction (or contrarity) of the remaining IS-premise.

(C1) yes: the inference is valid

(C2) no: the inference is invalid

Apagogic Proof: bIt

4. CONCLUSION

- Historical-cultural (protestant vs. Catholic)
- Simplicity of Proof method (Euler vs. Phoebifer)
- Unification of Proof method (17th Century vs. 21th Century)

Historical-cultural Protestant vc. Catholic Logic

Simplicity of Proof method (Euler vs. Phoebifer)

Unification of Proof method (17th Century vs. 21th Century)

Thank You Very Much For Your Attention!
